

Tablebases.com - Glass Table Top Adapter for Select Models

Tablebases.com has a fantastic selection of bases to suit any table top and décor. One question we get quite often is how to couple a table base with a glass table top.

Tablebases.com offers a [glass top adapter](#) that can be paired with select models of stainless steel and steel table bases. The glass top adapter takes the place of the mounting plate, which would normally be bolted or screwed into the table top material. The glass top adapter is an aluminum disk that matches the brushed metal finish on our stainless steel bases. It attaches to your glass table top with a clear epoxy glue (not included with the adapter), and is then bolted to the table base. The result is a very stable connection between your glass top and your table base, without ruining the sleek and modern style that glass tops provide. Looking down onto your finished table, you would only see your beautiful table base, and the aluminum disk(s).

The [Glass Top Adapter](#) is compatible with select models from the following series:

- [RFL Series Stainless Steel Table Bases](#)
- [RSQ Series Stainless Steel Table Bases](#)
- [Eclipse Stainless Steel Bolt Down Table Base](#)
- [Ravello Series](#)

The [Glass Top Adapter](#) is listed under the "accessories" tab at the top of our website, with table base accessories. The adapter does not include adhesive for attaching your glass table top (we recommend Loctite, Hysol Product 0151 optically clear adhesive). We recommend you contact a professional contractor or glass fabricator in your area for installation. Please order this adapter at the same time you order your table base, so that we can ensure compatibility with your table base. Please note: Photo is representative. The bottom plate (to couple adapter to the column of your chosen table base) is black, not silver. Please contact our customer service team for more information about compatible table bases.
